

BEYOND THE BASIC SELECT

Deborah Melkin Capital Area (Albany) SQL Server UG October 9, 2023

BEYOND THE BASICS: ME

- 20+ years as a DBA
- Mainly work with SQL Server
- Mainly work with OLTP but have worked with some data marts.
- NESQL Board Member
- Data Platform Community Speaker
- Friend of Redgate & #Redgate 100 (2022)
- Speaker Idol Winner 2019
- Microsoft Data Platform MVP (2020-)

Random facts:

- I'm a long-time member of the alto section in choir.
- I go to bluegrass jams regularly.
- l've been learning guitar and own a mandolin.
- I am a bit of a musical theater geek.

WHO DID NOT EXECUTE A SELECT STATEMENT TODAY?

SELECT sod.SalesOrderID
FROM Sales.SalesOrderDetail as sod

```
FROM employee cte cte
                                                                                                         MIN(details.MinOrderQty) OVER(PARTITION BY

```

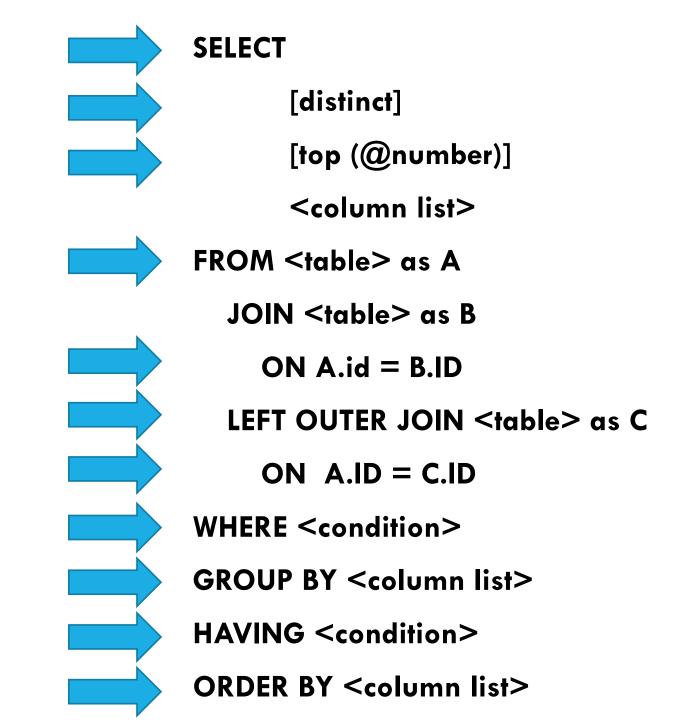

AGENDA

SELECT FROM "fancy rowsets"

SELECT "fancy column list" FROM rowsets

LOGICAL ORDER OF OPERATION

- 1. FROM
- 2. ON
- 3. OUTER
- 4. WHERE
- 5. GROUP BY
- 6. HAVING
- 7. SELECT
- 8. DISTINCT
- ORDER BY
- **10. TOP**

TIME TO GET "FANCY"...

DERIVED TABLES

```
SELECT <column list>
FROM (
    SELECT <column list>
    FROM <table(s)>
    as DerivedTable
```

CTE (COMMON TABLE EXPRESSIONS)

```
WITH cte AS (
    SELECT <column list>
    FROM <table(s)>
SELECT <column list>
FROM cte
```

VIEWS

```
SELECT <column list>
FROM vw_View
```

USER DEFINED FUNCTIONS

```
SELECT <column list>
FROM udf userdefinedfunction ()
SELECT <column list>,
    udf userdefinedfunction ()
FROM <rowset>
```

WINDOWED FUNCTIONS

```
SELECT ROW_NUMBER() OVER(),
    SUM() OVER(),
    COUNT() OVER(),
    PERCENTILE_RANK() OVER()
FROM <rowset>
```

LET'S TAKE A LOOK...

DERIVED TABLES: PROS & CONS

Pros:

- Commonly used
- Easy to use

- Not "reusable" from one query to another
- Query plan may not directly reflect the derived table

CTE: PROS & CONS

Pros:

- Great for hierarchical data
- Could be used to avoid temporary tables

- Not "reusable" from one query to another
- Data is not persisted
- Can create performance problems in certain scenarios
- Not necessarily faster

VIEWS: PROS & CONS

Pros:

- Reusable code
- Great for prepackaging reports for end users
- Indexed Views

- May cause execution plans to involve tables that aren't needed by the final query
- Hard to troubleshoot nested views
- Indexed views may not use the indexes or have the underlying data change too often
- Not designed for performance

USER DEFINED FUNCTIONS: PROS & CONS

Pros:

- Reusable code
- Can be used to implement Security Policy functionality
- SQL Server is working to improve performance: MTVFs with SQL 2017, scalar functions with SQL 2019

- Depends on your SQL
 Server version
 - Actual Execution Plans may not show underlying tables depending on the type of UDF
 - Inaccurate query plans caused by SQL Server cardinality estimates

WINDOWED FUNCTIONS: PROS & CONS

Pros:

- Flexibility for levels of aggregation on row levels
- Performance

- Cannot use in WHERE clause
- Some performance issues may occur

ADDITIONAL "FANCY RABBIT HOLES"

SELECT XML(), JSON_VALUE()

FROM OPENROWSET()\OPENQUERY()\OPENXML()

- FROM linkedserver.schema.table
- CROSS APPLY\OUTER APPLY
- UNION (ALL)\INTERSECT\EXCEPT
- etc...

FINAL THOUGHTS

- No Silver Bullet when trying to troubleshoot
- Performance, Performance, Performance
- Test, Test, Test
- Your Mileage May Vary
- Keep It Simple
- Sometimes a single statement isn't the best solution
- Even if your code doesn't change, the way SQL Server processes it may.
